Install on Linux

Add comments

To install XLingPaper on Linux, do these steps:

Download and install the XMLmind XML Editor (~27MB).

1. If you are able to use the Personal Edition, click here. Otherwise, please email sales at xmlmind and ask them how to purchase a professional license for version 5.3.0 of the XMLmind XML Editor that will run on Linux. (XLingPaper needs version 5.3.0 of the XMLmind XML Editor; unfortunately, newer versions have some incompatibilities with the XLingPaper configuration files.) They should be able to give you a link where you can download the installer for version 5.3.0. Get this installer.
2. Decompress and extract the installer in some directory.
3. In a Terminal, do

   ```
   sudo ln -s Full_path_to_where_you_extracted_xxe/xxe-persoVersion_number /usr/local/bin/xxe
   ```

4. You will also need to be sure and install a Java 6 package. The following works on at least some versions of Ubuntu:

   ```
   sudo apt-get install sun-java6-jre sun-java6-plugin sun-java6-fonts
   ```

Download and install the XLingPaper configuration package (~43MB).

1. Click here to download the latest XLingPaper configuration installer for Linux.
2. Decompress and extract the installer in some directory.
3. In a Terminal, do

   ```
   sudo ./install
   ```

4. When that is done, do

   ```
   ./runxxe
   ```

That's it. You are now set to use XLingPaper.
